## **AMENDMENTS TO THE SPECIFICATION:**

Please replace paragraphs [0001], [0015], and [0048] of the Specification with the following paragraphs:

[0001] Plasma processing apparatuses are used, e.g., for plasma etching of semiconducting, dielectric and metallic materials, physical vapor deposition, plasma enhanced chemical vapor deposition ("PECVD"), physical vapor deposition ("PVD"), ion implantation, and resist removal.

[0015] In order to enhance the uniformity of plasma processing of a substrate in a plasma processing apparatus, it is desirable to control the temperature at exposed surfaces of the substrate at which etching occurs, on which material is deposited (e.g., by a <u>PECVD or PVD</u> technique), and/or at which photoresist is removed.

[0048] The substrate support 40 can be used in a plasma processing apparatus in which various plasma processing operations including plasma etching, physical vapor deposition, plasma enhanced chemical vapor deposition (PECVD), ion implantation, and/or resist removal are performed.
